WHEELWRENCH

Description

Wheelwrench 32-33mm

ETTP Ref.

BOASTEP/32-33MM

Put the sleeve onto the square head of the handle end and the rocking bar on the other end.

When the sleeve is put on the nut to be disassembled or fastened, pay attention to the direction of loosening and tightening. Roll the rocking bar so that the handle is against the side of another bolt tightly.

After the nut is unscrewed, use the long bar to disassemble quickly.

In the same way, use the long bar to screw on quickly and then screw tightly with the labor saving wrench.
